SUMMARY

I design landing pages and product interfaces in Figma, and I build them in React and Tailwind CSS, so I design with the build in mind. My Temporal and Typani redesigns started with research into how each product works and ended with finished screens. I'm looking for a product or UI design role at a startup where I can work closely with developers.

SELECTED PROJECTS

[August 2026] Self-initiated concept Case study

Temporal Landing Page Redesign: Developer Infrastructure Product

- Temporal's product is complex, so I researched how durable execution works before I opened Figma, and I used that to decide what the page needed to explain.
- I redesigned the navbar, the hero and 13 more sections in about three weeks, iterating on each one many times.
- I drew a three-panel illustration (application, event history, service state) that shows how a workflow recovers from a failure, so a visitor can see it instead of reading about it.
- I made a side-by-side before and after video of the full page so the changes are easy to compare.

[September 2026] Self-initiated concept Case study

Typani Landing Page Redesign: Google Review Reply SaaS

- The original hero had several buttons competing for attention and too much text. I cut it down to one focus point and moved the demo video up into it, so a visitor sees the product working before reading anything.
- I turned a text-only "how it works" section into three visual cards, and merged four connected feature sections into bento cards, with animation direction for them.
- I gave the live demo its own background and border so it stands out from the page and can be scanned fast, and I highlighted the recommended pricing plan so the choice is obvious.
- I collapsed the FAQ except the first answer to save vertical space, restructured the footer, and removed the "Typani at a glance" section because I judged visitors wouldn't use it.

SKILLS

Figma : auto layout, components and variants, variables and design tokens, text and colour styles, typography, spacing and colour systems

Design : landing page and website design, web UI, visual hierarchy, layout, website strategy, product research, motion direction for animations

Front-end : HTML, CSS, JavaScript, React.js (basics), Tailwind CSS

Tools : Figma, Canva, Notion, VS code, Claude, Codex, Opencode, Kimi ai

Languages : English, Hindi

EDUCATION

Higher Secondary (Class 11-12) - Science : St. Xavier's College, Mumbai (2026)

Secondary (Class 10) : Orbit English School, Kalyan (2024)
